

# AWS Learning Accelerator

## *Module 1 - Part 1.3 - DynamoDB*

---

### Key Points

- We will store the results of our evaluation in DynamoDB using the PutItem API.
- This requires a decision on our data model that we would like to store in our DynamoDB table. We will use the below data model.

### Data Model

#### *ValidationRequests*

- *FileName: String*
- *ValidationResult: String*
- *FailureReasons: List<String> (Optional)*
- *Timestamp: String (ISO8601 Format)*
- *FileLocation: String*
- *FaceDetails: JSON Object*

We will use FileName as the partition key (main index) for our Table.
